Abstract

This thesis presents work focused on the creation of a sociable space for communication online. Sociable communication requires the ability to converse with others using simple and meaningful mechanisms, supporting flexibility and expressiveness. Equally important is the ability for people to read the space they inhabit and make sense of it in socially significant ways, such as people-watching to observe others' interests and interaction styles. A third key to sociable communication is emphasis on identity and embodiment, giving participants a strong sense of themselves and others through their online representations.

These issues are approached through research in areas ranging from sociology to urban architecture, directed at finding bases for the design of capabilities that are useful and engaging in the context of computer support for distributed multiparty communication. The result of this research is *Talking in Circles*, a graphical audioconferencing environment that employs abstract graphics for representation and provides lightweight access to multiple expressive modes. This thesis discusses foundations for work towards sociable communication online as well as the design and implementation processes involved in the creation of the *Talking in Circles* system. User experiences with the system, lessons learned and directions for further research into sociable communication are then detailed.

Acknowledgements

I would like first to thank Judith Donath, my advisor over these two years at the Media Lab. Her broad range of knowledge and interests has been invaluable in the multidisciplinary work I have been involved in at the Sociable Media group, and her guidance as understanding as it has been ambitious.

My thesis readers, Beth Mynatt and Chris Schmandt, along with my advisor, provided very helpful comments on both my thesis project and this document. The complex concepts I have tried to discuss are, I trust, much clearer thanks to their feedback.

Special thanks go to fellow members of the Sociable Media Group. Karrie Karahalios, David Chiou, Dana Spiegel, Rebecca Xiong, Fernanda Viegas, Joey Rozier, Matt Lee and Brian Bower others, have been wonderful to work with, friendly and creative. Lisa Lieberson has been cheerfully helpful, even during the most hectic times.

Past colleagues –mentors and friends– have been instrumental in helping me on the road of academic research, among them Scott Hudson, Gregory Abowd, Keith Edwards, Steve Greenspan. Thanks to Ian Smith, especially, for showing me the value of a sense of history.

I'm grateful to the Media Lab student community at large. The variety of their expertise and their willingness to share it with their fellow students is simply heartening. Bakhtiar Mikhak and Rich Fletcher, in particular, were extremely helpful with the musical puzzle and the window display projects, respectively. To Luke Weisman, Kelly Dobson and Tamara Lackner, thanks for the best group-project experience I've ever had.

To the members of the Aesthetics and Computation Group for their zaniness, to the members of the Tangible Media Group, to Todd Machover for the best school field-trip ever, to Brian Smith for his frankness, to Erik Blankinship and Tamara Lackner for their kookiness and world-class good humor, to many others, thanks for keeping things interesting.

Finally, to my family –Ari, Mario, Graciela, Ñato, Dorita, Fany, Juan–, gracias.
